

1. Will there be a typical pre-proposal site walk down of the sites or is the current pandemic preventing it

We will not be doing tours of the properties but you are more than welcome to drive around the schools, township properties, and MUA.

2. If there is no walk down planned, can the Township provide the following?
Locations of the electrical rooms and planned points of interconnection marked on the System Siting diagrams.

Please assume that the points of interconnection are within reasonable distances to where the panels will be installed.

3. Photographs of the point of interconnect switchgear cabinet showing stamped equipment labels.

You can drive by facilities to see where the switchgear cabinets are located outside the properties.

4. Size and location of the utility transformer supplying power to each of the meters.

The RFPS includes the annual kWh and coincident peaks (kW) for each site.

5. Can you also confirm there is no bid bond/security required with the RFP submittal?

Not for RFPS response. It may be required in the final contract.

6. How many copies of the RFP submittal are to be delivered and do you require an electronic copy?

Please send 5 copies.
